Interleaved Two-Column Test

Left column, paragraph one: this fixture tests two-column reading order. If an extractor reads the content stream row by row, left and right text will interleave and the reading order becomes unusable. The correct order is the whole left column, then the whole right column. Left column, paragraph one: this fixture tests two-column reading order. If an extractor reads the content stream row by row, left and right text will interleave and the reading order becomes unusable. The correct order is the whole left column, then the whole right column.

Right column, paragraph two: this fixture tests two-column reading order. The correct order is to finish the left column before starting the right column, not to alternate lines. Right column, paragraph two: this fixture tests two-column reading order. The correct order is to finish the left column before starting the right column, not to alternate lines.
